PROFILE

I am a B.Tech IT student with a strong interest in Data Science, Data Analytics, and Machine Learning. Through internships, academic projects, and professional certifications, I have developed practical experience in Python, SQL, Power BI, and statistical analysis. I enjoy working with data to identify trends, build predictive models, and create interactive visualizations that support informed business decisions.

EDUCATION

B.Tech- IT , CSI COLLEGE OF ENGINEERING
CGPA - 8.5/10

2023 – 2027
Ooty

INTERNSHIP EXPERIENCE

Data Analytics Intern

06/2025 – 07/2025

Cloud Institution

I gained practical exposure to the complete data analytics workflow, including data collection, cleaning, reporting, and visualization. I worked with datasets to interpret business information, generate meaningful reports, and present insights in a clear.

Data Analysis Intern

02/2026 – 03/2026

Cognifyz Technologies

I analyzed real-world datasets using Python and applied analytical techniques to discover trends, patterns, and meaningful insights. I performed data exploration, preprocessing, and visualization to support business decision-making.

Data Science Intern

02/2026 – 05/2026

CodeAlpha

Developed Machine Learning solutions including Car Price Prediction and Iris Classification projects. Applied Scikit-learn, Pandas, NumPy, and visualization techniques for predictive analytics.

TECHNICAL SKILLS

Programming languages

Python, SQL , Java, C, C++

Libraries

Pandas, NumPy, Scikit-learn, Tensorflow

Visualization

Power BI, Tableau, Matplotlib, Seaborn

Analytical Tools

MySQL Workbench, Google Colab, GitHub, MS Excel

PROJECTS

Expense Sharing System (Google Pay Inspired)

Developed an optimized expense settlement algorithm to minimize transactions between users, improving the efficiency of expense management. Analyzed and preprocessed transaction data using Python and Pandas to generate meaningful financial insights. Created clear and interactive visualizations with Matplotlib to identify spending patterns and support data-driven decision-making.

Concepts Used : Pandas, Matplotlib, Random Forest, Feature Engineering and More ..

House Price Prediction using Smart Regression Techniques

Built and evaluated multiple machine learning models to identify the best-performing predictive model. Conducted comprehensive Exploratory Data Analysis (EDA) and data preprocessing to uncover patterns and improve data quality. Assessed model performance using key evaluation metrics such as R^2 Score, Mean Absolute Error (MAE), and Root Mean Squared Error (RMSE) to ensure accuracy and reliability.

Concepts Used : Linear Regression , Lasso, Random Forest , XGBoost and More ...

CERTIFICATIONS

- IBM - Python for Data Science
- Forage - Data Analytics Job Simulation
- Tata - Data Visualization Job Simulation
- HackerRank - SQL (Advanced)
